Linkedin : <http://www.linkedin.com/in/gadithanmayee>

Github : <https://github.com/thanmayeereddy925>

Objective :

Curious and motivated 3rd-year engineering student with a growing interest in IoT, microcontrollers, and basic machine learning concepts. Passionate about learning new technologies and applying them to real-world projects. Eager to gain hands-on experience through internships, contribute to meaningful projects, and develop practical skills while exploring innovative solutions.

Education :

- Marri Laxman Reddy Institute of Technology and Management [MLRITM] , Btech - Computer Science and Engineering [AIML] Sept 2024 – Jun 2028
- Intermediate , Narayana Junior College , Kukatpally July 2024

Projects :

IoT-Based Smart Agricultural System : Built a basic smart agriculture system using sensors to monitor environmental conditions and support simple irrigation decisions using IoT concepts.

Spam Email Detection Using Machine Learning : Created a basic supervised machine learning model to classify emails as spam or non-spam, involving data preprocessing, feature extraction, and model evaluation using customized 13 features and connected to an email for real time detection.

IoT Chatbot: Built a RAG-based chatbot for IoT sensors and microcontrollers that retrieves relevant information from technical documents, integrates Wikipedia API for additional knowledge, generates context-aware responses using an LLM, and showcases results through a Flask Interface, demonstrating end-to-end retrieval and generation capabilities.

Accident Detection using Deep Learning : Developed an AI-based system to detect road accidents from images using deep learning. Built and trained the model using Python, TensorFlow/Keras, NumPy, and Pandas, and deployed it through a Flask-based web application for accident detection.

Deepfake Detection using Deep Learning : Developed a deep learning model to identify AI-generated or manipulated media (deepfakes). Implemented the detection system using Python, TensorFlow/PyTorch, and OpenCV to classify media as real or fake.

YTBT Cardio NLP: Developed YTBT Cardio NLP, a PyTorch 2D CNN + Transformer system translating 12-lead ECG waveform images into structured reports. Built a multi-role Flask portal (Doctor/Patient/Technician/Admin) with SQLite audit logs.

StudyMind AI : Developed StudyMind AI, an adaptive study navigator that generates personalized learning roadmaps and dynamic study timetables using Flask, SQLite, and Google Gemini API. Implemented a Random Forest ML engine to classify student concept mastery and automatically inject remedial topics, secured by a custom proctored, anti-cheat exam portal and synced peer timers.

Skills

- **Programming:** Python, C (basics)
- **Core Concepts:** Basics of Machine Learning, Supervised Learning, Data Preprocessing
- **IoT & Embedded (Basic):** Arduino, ESP8266, Sensors, IoT fundamentals
- **Libraries & Tools:** Pandas, NumPy, Scikit-learn
- Generative AI (Basics)
- RAG Applications
- Flask (Basics)
- TensorFlow/Keras
- **Other :** Enthusiastic, Problem-solving, willingness to learn, basic project implementation

Experince :

AI/ML Intern

[QuGates Technologies](#) | Bengaluru, Karnataka

June 2026 – Present

- Developing AI and Machine Learning solutions for **crop disease detection** using computer vision and deep learning techniques.
- Building intelligent image classification models to identify plant diseases and improve agricultural decision-making.
- Working on software automation solutions to streamline workflows and reduce manual processes.
- Performing data preprocessing, model training, testing, and performance evaluation for AI applications.
- Collaborating with the development team to integrate AI models into software solutions.
- Gaining hands-on experience with end-to-end AI development, from data preparation to deployment.

Part-Time:

[Oorjith](#) | Chandigarh , Punjab

July 2026 – Present

- Develop and support machine learning solutions by applying data preprocessing, model development, and performance evaluation techniques.
- Collaborate with cross-functional teams to build and optimize AI-driven applications using Python and machine learning frameworks.
- Assist in analyzing datasets, improving model performance, and implementing practical AI solutions for real-world use cases.
- Gain hands-on experience with the end-to-end machine learning workflow, from data preparation to model deployment and optimization.

Courses & Certifications:

- **Prime 2.0: AI/ML Batch** — Currently Pursuing
Topics: Machine Learning, Deep Learning, Generative AI, RAG, AI Projects, PyTorch, and AI Engineering.
- **Python with AI Course** — AI for Techies — Currently Pursuing
Focused on Python programming, AI fundamentals, problem-solving, and AI-based application development.
- **AI Projects Module** — Currently Pursuing
Hands-on AI/ML project development and deployment of real-world applications.
- **Infosys Springboard Certification** — GAN for Cardiovascular Disease (CVD)

Achievements

- Winner, Project Expo – Presented and demonstrated an IoT-based Smart Irrigation System, explaining its working and impact.
